# Characteristics of a good project proposal pdf

## Mission Need Statement NERSC-8

High Performance Production Computing platform capability by 2014 to address computational needs of projects sponsored by Office of Science Program Offices and to avoid creating an unacceptable gap between needs and available computing resources. By 2016, it is estimated that there will be a need for 47 times the current HPPC capability. Due to budget constraints, NERSC's 2013 supercomputer acquisition ("NERSC-7") will satisfy only a small portion of the need identified in the workshops.

Dr. William F. Brinkman, Director of the Office of Science Department of Energy, stated in March 20, 2012 testimony before the House Subcommittee on Energy & Water Appropriations, that, "In the course of our regular assessment of the needs of the scientific community, it is clear that in several areas DOE's simulation and data analysis needs exceed petascale capabilities." Brinkman, as well as others, noted, however, that making the transition to exascale poses numerous unavoidable scientific, algorithmic, mathematical, software, and technological challenges, all of which result from the need to reduce power consumption of computing hardware.

It is now widely recognized that computing technology is undergoing radical change and that exascale systems will pose a wide variety of technology challenges. These challenges have arisen because hardware chip technologies are reaching physical scaling limits imposed by power constraints. Although transistor density continues to increase, chips will no longer yield faster clock speeds. Instead, vendors are increasing the number of cores on a chip such that within this decade, chips are expected to have over 100 times more processing elements than today. These innovations in architecture and vast increases in chip parallelism (referred to as "manycore") will affect computers of all sizes. Many of the challenges we anticipate in the exascale computing era are confronting us even today. According to the recent National Research Council report *The Future of Computing Performance: Game Over or Next Level?*, "We do not have new software approaches that can exploit the innovative architectures, and so sustaining performance growth—and its attendant benefits—presents a major challenge." Users of such systems will require new algorithms that run more efficiently, exploit parallelism at a much deeper level, accommodate far less memory per process space, and take much greater care in considering data placement and movement and machine resilience. The recent report from the *ASCR Workshop on Extreme-Scale Solvers: Transition to Future Architectures* outlined these challenges in detail for the mathematical solver technology that is at the heart of the application codes that enable DOE scientific discovery.

## Sample Evaluation Process

Here is the documentation for a sample process used to evaluate proposals you receive in response to a Request for Proposals (RFP).

1. A Request for Quotation (RFQ999999) was posted on GSA eBuy on <DATE> (Reference # NBQ999999). Respondents were given until noon <DATE> to submit their proposals. The Statement of Work included four technical evaluation criteria against which the proposals would be rated.
2. 9 proposals were received by the due date and made available via the <BLM District Office's SharePoint site folder> to the Technical Proposal Evaluation Committee (TPEC) on <DATE>. The TPEC consists of (3 - 7 members are recommended):
  - <NAME>, Chair, <TITLE>, <Office>
  - <NAME>, <TITLE>, <Office>
  - <NAME>, <TITLE>, <Office>
  - <NAME>, <TITLE>, <Office>Cost estimates for each proposal were not sent to the panel.
3. Panelists were given <11> working days to review each proposal, evaluate them against the criteria, provide numerical ratings, and include written justification to explain the ratings and highlight strengths and weaknesses. The evaluations were documented using the Technical Evaluation Rating Form (see Appendix A).

Points for each criterion were guided by the definitions on the Technical Evaluation Criteria Ratings paper (see Appendix B). For example, if the maximum points available were 30, then the respondent could get 25-30 points for excellent qualifications, but only 13-18 if their qualifications were merely acceptable.
4. The TPEC chair (also the contracting officer's representative) put TPEC members' rating points for each criterion for each proposal, plus the total points, on one sheet (see Appendix C), making note of each person's top 5 and bottom 4 total scores.
5. On <DATE>, the TPEC and contracting officer participated in a conference call to discuss their evaluations (see Appendix D). The 5 proposals with the lowest ratings (<LST COMPANIES>) were quickly discussed and eliminated.

Characteristics of a good project proposal for funding, Characteristics of a good project proposal in relation to tendering process.

Once you get ideas for overall organization, you can begin to fill in the sections with your introduction, history, problem identification and scope of the project. What to Avoid There are definitely a few things to avoid when writing your proposal: Writing a project proposal can be a competitive endeavor. The goal of a project proposal is to share the pertinent details to demonstrate the merits of the project. How do they view themselves? thanked the writer. Collaboration with all interested groups in planning of the proposed project is evident in the proposal. Context : Provide some context for the project with a bit of history. The budget explanations provide an adequate basis for the figures used in building the budget. All of the major matters indicated in the proposal guidelines are clearly addressed in the proposal. Problem: Identify the problem the project will address and resolve. What's important to them? A Winning Tone: The tone of your project proposal is a crucial element of the document. The budget and the proposal narrative are consistent. When you want to pitch a project, whether to gain financial support or get the go-ahead to proceed, you'll need to craft a winning project proposal. It speaks to the reader, helping the reader understand the problems and proposal. All of the directions given in the proposal guidelines have been followed carefully. The length is consistent with the proposal guidelines and/or funding agency expectations. Having done your due diligence, you will use a project proposal to outline the project and counter any obvious objections, presenting your case in a genuine and persuasive tone. An effective project proposal has several key features that will help you attain your goals. Customize your proposal to suit your target audience. This is your chance to demonstrate how your project ties in with overall company goals and any existing SOLUTION: Present the scope of the project as the solution to the problem. Pay attention to your target public. Provide the required

details directly without excess fluff. All government procedures were followed in matters of matters such as fulfillment and protection of the civil rights of human subjects. 12. Be careful not to come across a condescending. The objectives of the project are given in detail. 4. The most important ideas are highlighted and repeated in several places. 3. The commitment of all parties involved is evident, for example, commitment letters in the apartment and cost sharing declared in the narrative of the proposal and the budget. 7. Establishing common soil can help you be more persuasive. There is a detailed schedule of activities for the project, or at least sampling portions of such a complete schedule of projects. 5. The need for the proposed activity is clearly established, preferably with data. 2. Your proposal should persuade the question of your target audience, why they need to participate. A Samplesif Project proposal is struggling with the proposal of your project proposal, you can examine some samples and models to get some Idé IAS for format and tone. Keep your proposal succinct and as soon as possible. You want your readers to relate to your message and stay on board, then engagement will be the key. Ideally, this is the hook that involves your readers. The writing style is clear and concise. If applicable, there is a clear statement of commitment to continue the project after external funding ends. 18. The qualifications of the project staff are clearly communicated. 19. 19. Summarizing statements and heads are used à € à €
